

EST. 2003

ISO/IEC 17025:2017 ACCREDITED

Avid is an on site 3-dimensional measurement service that delivers high precision results to the shop floor. We have provided services to manufacturers in 15 industries across North America, using articulating arms, laser trackers and high-density scanning technology.

Our ability to measure up to 500 feet allows us to inspect and facilitate the alignment of virtually any size component, making us an ideal resource to support new installations, repair and shutdown activities.

Our key expertise lies in the certification of large assemblies, aligning & certifying fixtures, and providing support for prototypes and new product development. Some of our other services include part layouts and reverse engineering, as well as repeatability and capability studies on parts, tooling and automation. Unique specialties include the installation of engineering changes to floor fixtures, certifying part sequencing racks and process trouble-shooting through our tracking ability.

Every project comes with a custom report that provides your team with a clear understanding of the work performed and the goals achieved.

You can expect to experience something different. We pride ourselves on our difference, and in making a difference!

Angela Snary, President

THE AVID ADVANTAGE

- Reduce alignment, installation and repair time
- Instantly gain access to the expertise you need, when you need it
- Utilize the latest technology without the capital outlay
- Maintain key personnel and components in-house
- Eliminate costly part bank builds
- Increase your diversity spend with a service that has real impact
- Minimize shipping and handling costs

EXPERTISE IN KEY AREAS

- Large Assemblies, Steam Generators, Heat Exchangers, Cooling Units
- Tooling Repeatability • Part Development & Layouts
- Leveling & Alignment • Floor Fixtures & Racks • Fixture Certification
- Reverse Engineering & Colour Mapping via High Density Scanning

SIGNIFICANT CONTRACTS

- Nematik Carrier Transfer System
- Ontario Power Generation Turbine Retrofit
- Chrysler Alignment of Framer & Liftgates
- Diamond Aircraft Wing, Landing Gear & Fuselage
- Babcock & Wilcox Steam Generator Certifications
- General Motors Re-Alignment of Gate Trollies
- Subaru Roof Rails Launch Support
